

Igloo Construction Homepage Redesign Vision

Ana sayfa için araştırma destekli görsel yön, bilgi mimarisi, teknik uygulama kuralları, proje footprint haritası ve Imagegen konseptleri.

Son karar: Igloo ana sayfası premium mimari portfolyo gibi güzel, fakat inaat firması gibi güvenilir olmalı. Harita bolumu gercek proje pinleriyle beslenen editorial footprint visual olmalı.

1. Arastirma Ozeti

Deloitte 2026 gorunumu infaat firmalarinin maliyet, tedarik, is gucu, marj ve takvim baskisi altinda oldugunu gosteriyor. Bu nedenle ana sayfa sadece estetik degil, surec disiplini ve guven anlatmali.

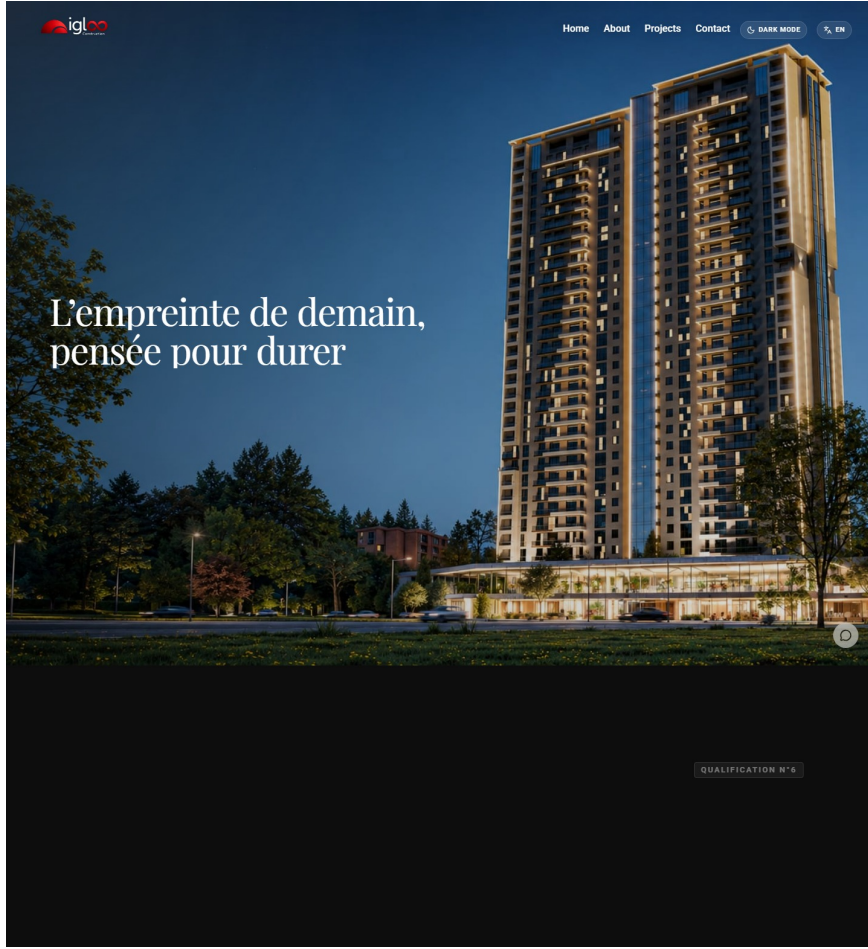

McKinsey infaat ekosisteminde markasma, musteri odaklilik, teknoloji yatirimi ve deger zinciri kontrolunun one ciktigini vurgular. Igloo bunu koordineli teslimat ortagi pozisyonuna cevirmeli.

NN/g homepage prensipleri: kim oldugunu net anlat, icerigi orneklerle goster, kullaniciyi eyleme yonlendir, sayfayi basit tut.

web.dev ve WCAG/MDN kaynaklari performans ve hareket hassasiyeti icin net: hero LCP kontrol edilmeli, reduced-motion durumunda icerik okunur kalmali.

Alan	Bulgu	Tasarima ceviri
Sektor	Takvim, maliyet ve is gucu baskisi guven ihtiyacini artiriyor.	Surec, kalite, teslim ve saha disiplini sinyalleri.
Rakipler	Skanska, Turner, VINCI, Webuild: projeler ve rakamlar.	Projects ve metrics erken gelmeli; testimonial yerine portfolyo kaniti.
Premium mimari	ZHA, BIG, BAT: buyuk tipografi, fotograf, az bolum.	6 bolum; bos dekor yerine fotograf, tipografi ve footprint.
UX	Basit homepage, net amac, orneklerle aciklama.	Explore Projects ve Contact Team cift CTA.

2. Mevcut Ana Sayfa Denetimi

- Desktop body height yaklaşık 5595 px, mobile yaklaşık 6109 px.
- Hero görsel olarak iyi, fakat kategori mesajı ve encoding temizlenmeli.
- Project carousel doğru hamle; kart görselleri kalite olarak elenmeli.
- StatsGrid daha erken güven sinyali olarak manifesto içine alınabilir.
- Scroll-trigger opacity boş alan algisi yaratmamalıdır.

3. Onerilen Ana Sayfa Akisi

Hero -> Manifesto + Metrics -> Selected Projects -> Process / Delivery Discipline -> About + Project Footprint Map -> Contact Footer

Hero

Building tomorrow. Made to last. - Full-bleed fotograf/video, trust facts, Explore Projects + Contact Team.

Manifesto + Metrics

We build more than structures. - 8+ yil, 11 proje, 2500+ konut, 4 wilaya gibi kanitlar.

Selected Projects

Gercek portfolyo kaniti - Status/location/scope chipleri, iyi secilmis fotograf, mobile swipe.

Process

Engineering excellence, delivered with discipline. - Planlama, muhendislik, saha, kalite/takvim, teslim.

Footprint Map

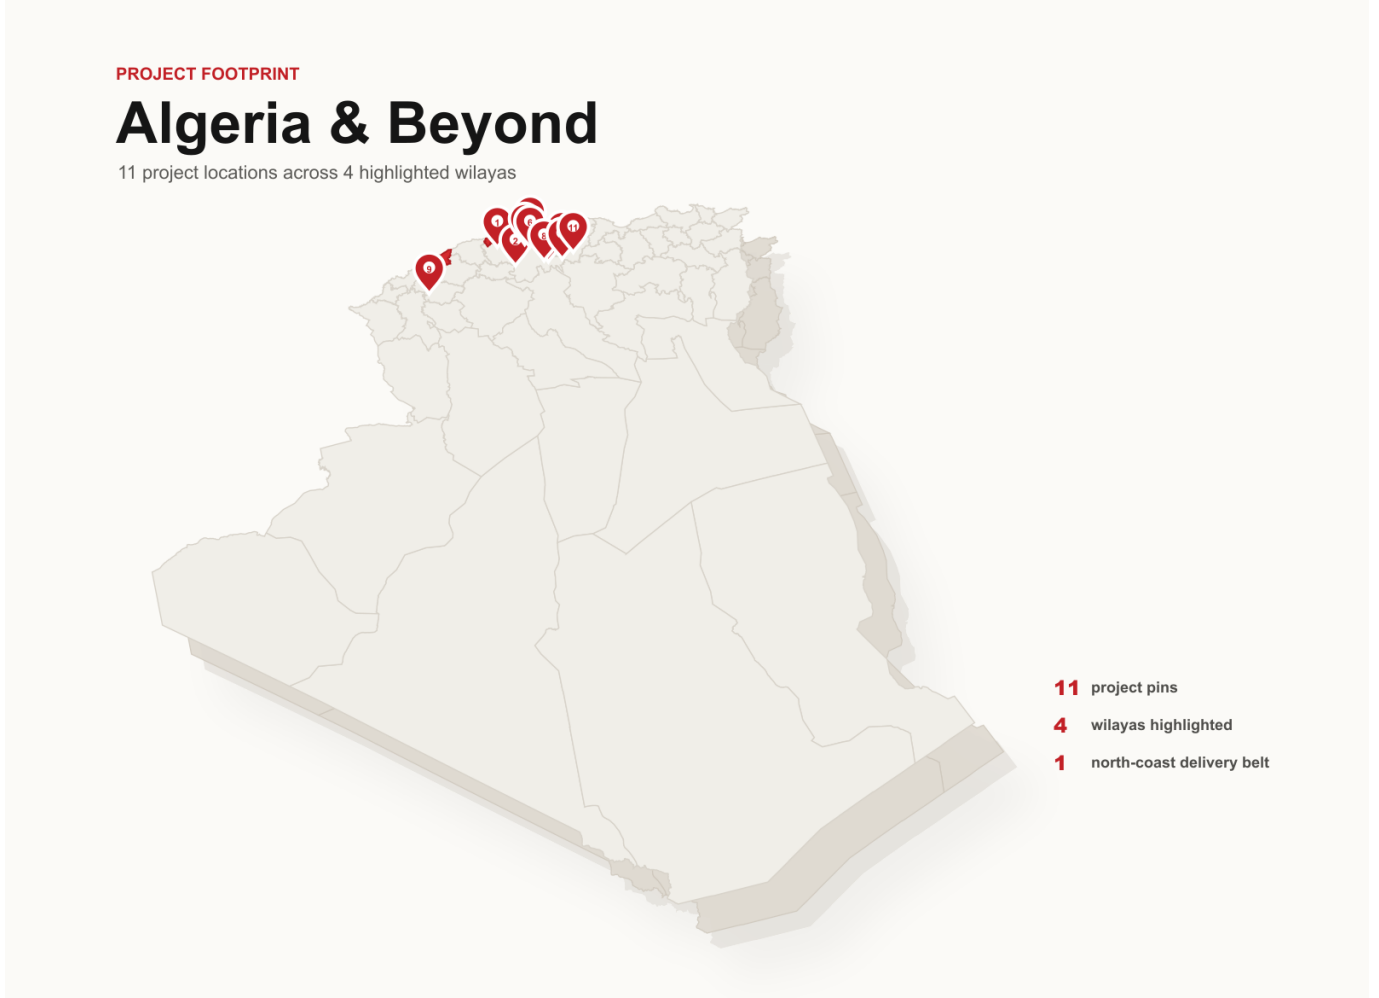

Algiers & Beyond - 11 proje pini, 4 wilaya, Algiers cluster, Mostaganem outpost.

Contact Footer

Let us build what lasts together. - Email, telefon, ofis, proje gorusmesi CTA.

4. Project Footprint Map

Referans gorseldeki gibi acik gri Algeria silhouette + kirmizi proje bolgeleri + pinler hedeflenmeli.
Bu versiyon gercek Algeria ADM1 boundary datasindan uretilmis full-country footprint assetidir.

- Data source: geoBoundaries ADM1 Algeria polygon data + src/data/projectMap.ts project pins.
- Coverage: Tipaza, Algiers, Mostaganem, Boumerdes.
- Design: real Algeria silhouette, red wilaya highlights, project pins, subtle parallel/3D depth.

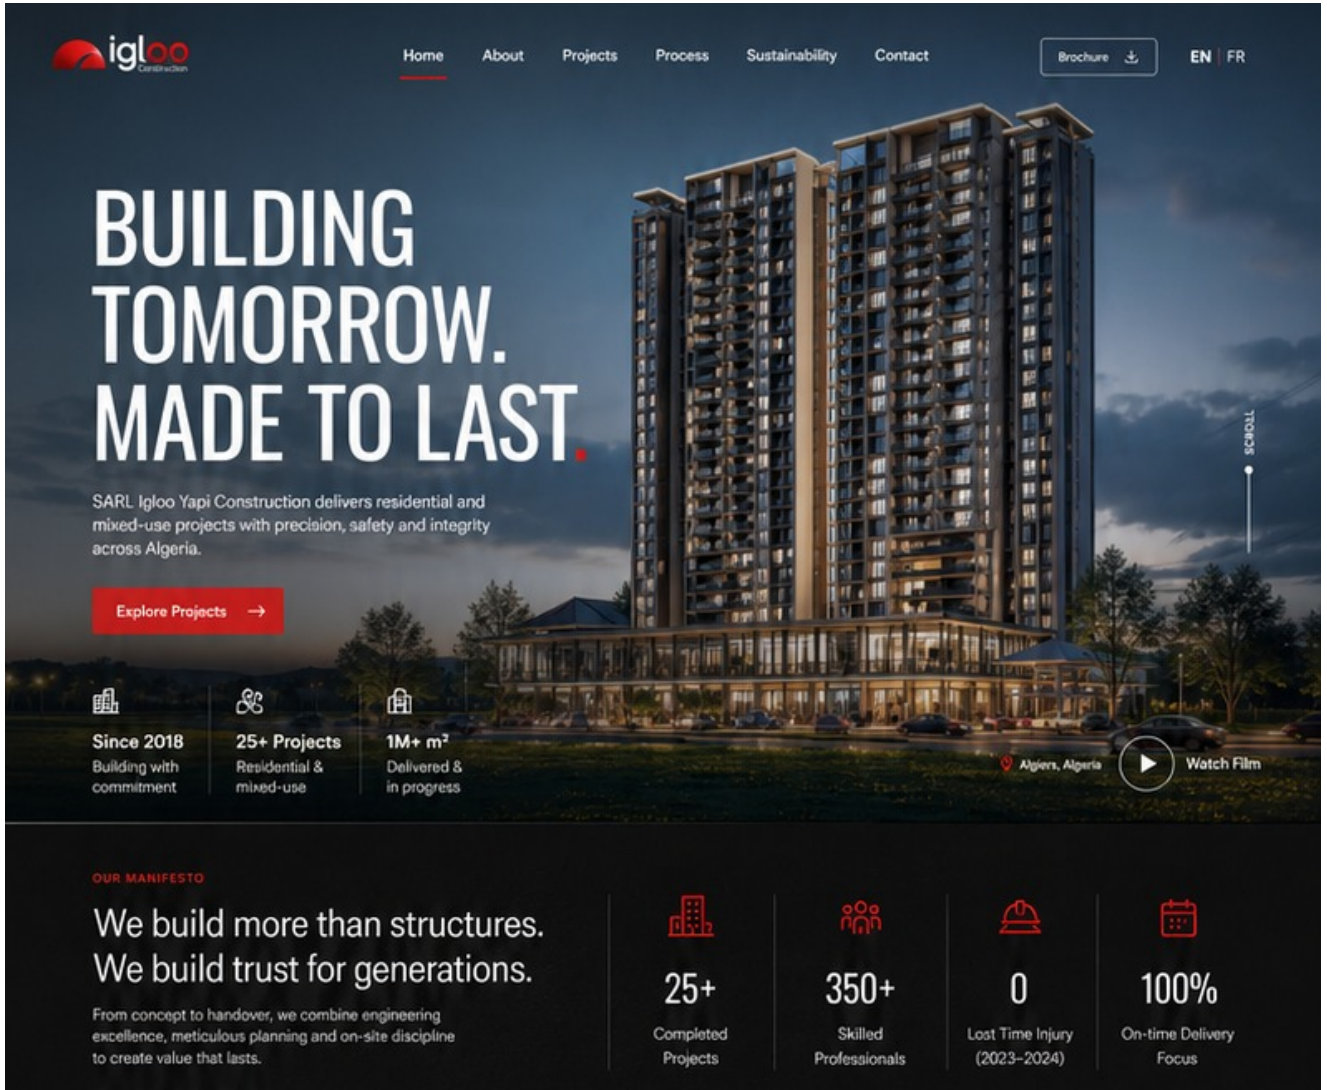

5. Map Library Decision

Option	Pros	Cons	Verdict
D3 Geo + TopoJSON + SVG	Light, precise, full art direction control.	Needs custom component and map asset prep.	Recommended
react-simple-maps	Fast React wrapper over d3-geo/topojson.	Less low-level control.	Good fallback
Three.js/R3F	True extruded 3D map.	Heavier, canvas QA, mobile/perf cost.	Phase 2 only
MapLibre/Leaflet/deck.gl/ECharts GL	Powerful map/chart engines.	Too heavy or too map-app/chart-like for this editorial visual.	Avoid for homepage

- Boundary data: geoBoundaries ADM0/ADM1, CC BY 4.0.
- Natural Earth is fine for ADM0 silhouette but not wilaya highlights.
- Avoid GADM unless commercial permission is obtained.
- Use Mapshaper at build time to simplify and export TopoJSON.

6. Imagegen Desktop Konsepti

Konsept final metin/veri degildir; gorsel yon ve bolum ritmi referansidir.

excellence, meticulous planning and on-site discipline to create value that lasts.

OUR PROCESS

Engineering Excellence. Delivered with Discipline.

A proven process supported by people, systems and technology to ensure quality, safety and time.

1. Planning & Design

Feasibility, design coordination and value engineering.

2. Engineering

Detailed engineering and BIM-driven coordination.

3. Construction

Site execution with strict quality and safety control.

4. Monitoring

Schedule, cost and quality monitored in real time.

5. Handover

Commissioning, handover and aftercare support.

ABOUT US

Building Algeria. For Algeria.

Founded in 2018, SARL Igloo Yapi Construction is an Algerian company specialized in residential and mixed-use projects. We are committed to quality, safety, and sustainable construction across the country.

- ✓ Algerian company headquartered in Algiers
- ✓ Experienced in housing & mixed-use developments
- ✓ Strong focus on safety, quality and on-time delivery
- ✓ Trusted partner for public & private clients

7. Imagegen Mobile Konsepti

Mobilde ilk viewport net, projeler swipeable, process liste/accordion gibi düşünülmelidir.

8. Teknik Kural ve QA

- Yeni dependency olarak ilk tercih d3-geo + topojson-client; react-simple-maps sadece hiz kazanmak istenirse.
- React 19 functional components, Tailwind CSS v4, GSAP/ScrollTrigger, Lenis, lucide-react ve shared UI primitives korunmalı.
- usePrefersReducedMotion her animasyonda guard olarak kullanılmalı.
- npm run lint
- npm run build
- Playwright snapshots: /, /projects, /projects/:slug, /bat-demo/projects, ?edit=1
- Map labels/text should not be inside unreadable tilted transforms unless counter-transformed.

Detailed map research: docs/project-footprint-map-library-research-2026-07.md
